<b>Uncollectibles Expense.....</b>	<b>28</b>

1 Q. Please state your name and business address.

2 A. My name is Eric Lounsberry and my business address is Illinois Commerce  
3 Commission, 527 East Capitol Avenue, Springfield, Illinois 62701.

4 Q. Are you the same Eric Lounsberry who previously submitted testimony in this  
5 proceeding?

6 A. Yes. I previously submitted direct testimony in this proceeding, ICC Staff Exhibit  
7 4.0, with supporting Schedules 4.1 UE through 4.3 UE as well as 4.1 CIPS  
8 through 4.9 CIPS.

9 Q. What is the purpose of your rebuttal testimony?

10 A. My rebuttal testimony responds to the revised rebuttal testimony of Jimmy L.  
11 Davis.

12 Q. Do you have any schedules attached to your rebuttal testimony?

13 A. Yes. I have the following schedules attached:

14	Schedule 11.1 UE	Summary of Adjustments
15	Schedule 11.2 UE	AMR Expenses
16	Schedule 11.1 CIPS	Summary of Adjustments
17	Schedule 11.2 CIPS	Ashmore Storage
18	Schedule 11.3 CIPS	Sciota Storage
19	Schedule 11.4 CIPS	Johnston City Storage
20	Schedule 11.5 CIPS	Storage Field Usage Rate

21 Q. What recommendations are you making in your rebuttal testimony?

22 A. I recommend Union Electric Company ("UE") reduce its working capital  
23 allowance for gas in storage by \$2,000, that it specify in its tariff that it will meet  
24 all requests for new service under certain conditions within 15 working days, and  
25 that the Commission disallow \$210,000 in test year expenses related to its  
26 decision to institute an Automated Meter Reading ("AMR") project. I also provide  
27 an explanation as to why information using future gas prices as the basis for the  
28 uncollectibles expense amount is inappropriate.

29 I recommend Central Illinois Public Service Company ("CIPS") reduce its working  
30 capital allowance for gas in storage by \$891,000 ~~842,000~~, that it retire the Belle  
31 Gent storage field, and that it specify in its tariff that it will meet all requests for  
32 new service under certain conditions within 15 working days. I also provide an  
33 explanation as to why information using future gas prices as the basis for the  
34 uncollectibles expense amount is inappropriate.

## 35 **UE Adjustments**

### 36 **Working Capital Associated with Gas in Storage**

37 Q. What recommendation did you make in your direct testimony regarding the  
38 amount of working capital allowance that UE should receive for the working gas  
39 contained in its leased natural gas storage field?

40 A. I recommended that the Commission reduce UE's requested working capital  
41 allowance by \$127,000. This reduction involved two parts. The first involved

42 taking into account the higher than average levels of natural gas contained in  
43 storage during the test year versus historical years. This adjustment was for  
44 \$125,000. The second involved making a minor correction due to the use of  
45 actual information rather than estimated information. This adjustment was for  
46 \$2,000.

47 Q. Did UE dispute your recommendation?

48 A. Yes and no. UE disputed the \$125,000 adjustment, but was silent with regard to  
49 the \$2,000 adjustment. Therefore, I am assuming UE does not dispute the  
50 second part of my adjustment.

51 With regard to the \$125,000 issue, UE noted that the reason the average volume  
52 of natural gas in the leased storage field was higher during the test year than  
53 historical levels was that it had changed the contractual terms of the leased  
54 storage agreement to increase the volume of natural gas reserved at the field  
55 and that UE has contracted for this increased amount in the future. Therefore,  
56 the historical volumes should not correlate to the test year volumes.

57 Q. Do you agree with UE that due to the change in contractual terms the volumes  
58 requested in this proceeding would not correlate to historical levels?

59 A. Yes. Therefore, I am withdrawing my recommendation to reduce the working  
60 capital allowance by \$125,000.

61 Q. What is your overall recommendation regarding UE's requested working capital  
62 allowance for its gas in storage?

63 A. I recommend the Commission reduce UE's requested working capital allowance  
64 for gas in storage by \$2,000 as shown on ICC Staff Exhibit 11.0R, Schedule 11.1  
65 UE.

## 66 **Installation of New Services**

67 Q. What recommendation did you make in your direct testimony with regard to UE's  
68 general terms and conditions as it relates to the installation of new services?

69 A. I recommended that the Commission modify UE's tariff to include a commitment  
70 to install new services in 15 working days or less.

71 Q. Did UE agree with your recommendation?

72 A. No. Mr. Jimmy Davis, in his revised rebuttal testimony, AmerenCIPS/UE Exhibit  
73 No. 11.0 (Rev.), provided five points to dispute my recommendation. These  
74 points are summarized below:

- 75 1) Ameren is not aware of any problem that requires the proposed  
76 time limit;
- 77 2) Staff's proposed language does not take into account extenuating  
78 circumstances beyond the control of Ameren;
- 79 3) Staff's proposed language may hamper Ameren's ability to  
80 efficiently and effectively schedule work that needs accomplished;
- 81 4) Ameren's work force reduction does not impact people that install  
82 services; and

83                   5)     Ameren is concerned whether a rate case is the appropriate venue  
84                   for this topic.

85     Q.     Do you agree with Mr. Davis that there does not currently exist a problem that  
86             requires UE to add the proposed language to its tariff?

87     A.     Yes. However, that was not the reason for my recommendation. My  
88             recommendation was intended to have requirements in place that would keep the  
89             amount of time it took to provide service to new customers at a reasonable level.  
90             As I noted in my direct testimony, UE has indicated that it intends to reduce  
91             staffing through an early retirement program. A 15-day new service installation  
92             time limit is a proactive step that will help ensure that UE does not cause service  
93             deterioration with its resource reductions.

94     Q.     Do you agree with Mr. Davis' second comment that the proposed language does  
95             not take into account extenuating circumstances beyond the control of Ameren  
96             that could cause it to not meet the 15-day time limit?

97     A.     Yes. I am willing to alter the language to account for some of the circumstances  
98             that Mr. Davis noted as potential reasons for missing the deadline, such as work  
99             stoppages and specialized equipment requests. However, Mr. Davis also noted  
100            other topics that, if included, would exempt it from the 15-day deadline for  
101            virtually every possible reason, such as an excessive number of requests.

102           Therefore, I propose the following sentence be added to my proposed language:

103           The 15-day time limit does not apply in those instances where  
104           specialized equipment is necessary for or to install the service  
105           connection or in the event of work stoppages, insurrection, acts of  
106           terrorism, or other calamities that require the Company's resources  
107           be directed elsewhere.

108       Q.     Do you agree with Mr. Davis' third comment that the proposed language would  
109               create staffing problems and inefficiencies because the utility would need staff  
110               available to connect new customers within the mandatory time frame under all  
111               circumstances?

112       A.     No. Since I agreed to add language to exclude those circumstances where  
113               specialize equipment is needed or other events that would impact UE's ability to  
114               provide timely service, I believe the potential for staffing problems and  
115               inefficiencies should be reduced if not resolved.

116       Q.     Why do you believe the potential for staffing problems and other inefficiencies will  
117               be resolved through the additional language?

118       A.     I believe UE should be as efficient as its sister company Central Illinois Light  
119               Company ("CILCO"). In the recent CILCO rate case, (Docket No. 02-0837, Staff  
120               Exhibit 11R, pages 15 and 16), CILCO made virtually the same arguments with  
121               regard to efficiency of its operations. However, CILCO estimated, for the period  
122               2000 through 2002, it had fulfilled 95% of the new customer requests within 15  
123               working days, even when taking into account the need for specialized equipment  
124               or other areas of concern that CILCO discussed (UE also raised the same  
125               arguments). This information demonstrated to me that very little, if any, of

126 CILCO's work practices would require alteration should the Commission accept  
127 Staff's recommended 15-day time limit for new service installations.

128 Q. For what percentage of customers was UE able to provide new service  
129 installations within 15 working days?

130 A. I do not know. I have sent a data request asking for this information from both  
131 UE and CIPS but as of the date of my rebuttal testimony I have not yet received  
132 a response. I request that both UE and CIPS discuss the response to Staff's  
133 data requests in surrebuttal testimony.

134 Q. Do you agree with Mr. Davis' fourth comment that the early retirement program  
135 did not impact employees who are involved with the installation of new services;  
136 therefore, there will not be an impact on installation time for new services?

137 A. No. It is my understanding that the employees who are involved with the  
138 installation of new services were not part of the early retirement offering  
139 discussed in Mr. Davis' testimony. Therefore, it was impossible for any of those  
140 employees to take early retirement. However, given UE's early retirement  
141 offering to other employees, it is possible the employees used to install new  
142 service could also become reduced in the future, either through an early  
143 retirement offering, layoff, or just through attrition. Therefore, I believe my  
144 concern about workforce reduction impacting the amount of time to install new  
145 services is justified.

146 Q. Do you agree with Mr. Davis' fifth comment that a rate case is not the appropriate  
147 venue for this sort of recommendation?

148 A. No. The Commission is not precluded from addressing topics in a rate case that  
149 potentially impact the reliability and efficiency of service to ratepayers. Further,  
150 my comments regarding the application of the same standard to all gas utilities in  
151 other rate cases was intended to show that Staff was not singling out UE or  
152 CIPS, but that the same consistent treatment would be applied to all gas utilities.

153 Q. Do you have any other issues with regard to adding the 15-day time limit that you  
154 wish to address at this time?

155 A. Yes. In the CILCO rate case, Docket No. 02-0837, mentioned above, CILCO  
156 raised a concern about how it would become aware of when the customer had  
157 completed site preparation and the 15-day time limit would begin. To address  
158 that concern, I recommended certain language changes to the proposed  
159 language in that proceeding. I believe, in order to remain consistent and to avoid  
160 any potential confusion, a similar clarification should be made in the UE  
161 language. Therefore, I propose to clarify my proposed language in the following  
162 manner:

163 The Company shall provide service connections to new customers within  
164 15 working days at the requested location after being notified by the party  
165 who completed the service application request that once property grading  
166 is in place, any obstructions or constructions materials are removed, the  
167 location for the meter installation is prepared, and the Company  
168 determines a distribution main extension is not necessary in order to  
169 provide service.

170 Q. Based on the various changes you made to your proposed language, what  
171 language do you recommend the Commission adopt in UE's tariff in this  
172 proceeding regarding the amount of time to allow for new service connections?

173 A. I recommend UE alter its tariff's Terms and Conditions under Installation of  
174 Service, 1<sup>st</sup> Revised Sheet No. 11, by adding the following to the existing  
175 language:

176 The Company shall provide service connections to new customers  
177 within 15 working days at the requested location after being notified  
178 by the party who completed the service application request that  
179 property grading is in place, any obstructions or construction  
180 materials are removed, the location for the meter installation is  
181 prepared, and the Company determines a distribution main  
182 extension is not necessary in order to provide service. The 15-day  
183 time limit does not apply for those instances where specialized  
184 equipment is necessary for or to install the service connection or in  
185 the event of work stoppages, insurrection, acts of terrorism, or other  
186 calamities that require the Company's resources be directed  
187 elsewhere.

## 188 **Automated Meter Reading**

189 Q. What recommendation did you make in your direct testimony regarding UE's  
190 AMR program?

191 A. My direct testimony stated that I had a concern that UE decided to employ the  
192 AMR system without conducting a cost/benefit study. Further, I noted that Mr.  
193 Davis' direct testimony was unclear regarding what benefits the AMR system  
194 provided. Therefore, I requested UE provide more detailed information in its

195 rebuttal testimony regarding the benefits and/or savings that result from using an  
196 AMR system.

197 Q. Did UE provide any information to address your concerns?

198 A. No, UE did not provide any rebuttal testimony that discussed or addressed my  
199 concerns. On June 3, 2003, I did receive a supplemental response No. 1 to Staff  
200 data request UE-ENG 1.33 that purports to provide more information regarding  
201 UE's AMR system. However, I was not able to review this material prior to the  
202 filing of my rebuttal testimony.

203 Q. What is your current recommendation with regard to UE's AMR system?

204 A. Since I have not seen any information that UE's decision to enter into the AMR  
205 system was the result of expected costs savings to ratepayers or provided other  
206 significant non-economic benefits to ratepayers, I recommend the removal of any  
207 costs associated with the AMR system from this proceeding. As shown on ICC  
208 Staff Exhibit 11.0R, Schedule 11.2 UE, the removal of the AMR system results in  
209 a \$210,000 expense reduction.

## 210 **Uncollectibles Expense**

211 Q. Are you presenting Staff's position regarding the appropriate amount of  
212 uncollectibles expense that the Commission should allow UE to receive in this  
213 proceeding?

- 214 A. No. Staff's position on this topic is contained in the Rebuttal Testimony of  
215 Theresa Ebrey, ICC Staff Exhibit 10.0R.
- 216 Q. What is the purpose of your testimony as it relates to this topic?
- 217 A. My testimony explains why the comments made by Mr. Davis concerning any  
218 potential link between future gas costs and uncollectibles expense are irrelevant  
219 in determining the appropriate amount of uncollectibles expense the Commission  
220 should allow UE.
- 221 Q. What did Mr. Davis state in his testimony regarding the appropriateness of UE's  
222 requested level of uncollectibles expense?
- 223 A. Mr. Davis stated that the Staff's adjustment to UE's requested level of  
224 uncollectibles expense is inappropriate because it ignores that the uncollectibles  
225 expense during the test year is related to the higher cost of gas during the test  
226 year. He also noted that all the indicators show that gas costs will be higher in  
227 the foreseeable future versus a five-year historical period.
- 228 Q. What problems do you have with Mr. Davis' comments?
- 229 A. I have three problems with Mr. Davis' comments. First, Mr. Davis attempts to  
230 use future gas costs as a basis for making a change to a historical test year.  
231 However, my understanding is that, only known and measurable changes, or  
232 changes that are readily determinable, are allowed to historic test years. Mr.  
233 Davis' future gas costs are neither.

234 Second, his statements make the assumption that a direct correlation exists  
235 between high gas costs and high uncollectibles expense. However, Mr. Davis  
236 provides no evidence in support of this assumption.

237 Finally, Mr. Davis admits that the NYMEX gas prices that he references are not  
238 entirely reflective of the gas costs charged by UE, due to use of storage gas and  
239 other pricing mechanisms.

240 Q. What sort of adjustments are allowed for historical test years?

241 A. The Commission's Standard Filing Requirements, 83 Illinois Administrative Code  
242 285, Section 150(e), allow for pro forma adjustments for all known and  
243 measurable changes in the operating results of a historic test year or if the  
244 changes are determinable.

245 Q. Do you consider Mr. Davis' recommendation to rely on future gas costs as  
246 support for not adjusting the uncollectibles expense a known and measurable  
247 change?

248 A. No.

249 Q. Do you agree that there exists a correlation between high gas costs and a high  
250 uncollectibles expense?

251 A. No. I do not believe such a correlation exists because higher gas costs do not  
252 automatically result in high gas bills. A large amount of a gas utility's load results

253 from winter heating. If the utility experiences a warmer than normal winter  
254 season, its customers' gas usage is reduced. In that situation, if gas costs are  
255 high, the bill impact is reduced due to the lower usage. Therefore, if anything,  
256 the uncollectibles expense has some correlation to the temperatures experienced  
257 during the winter season not gas costs.

258 Q. Why is the reliance on future gas cost projections that are not reflective of UE's  
259 future gas costs a concern?

260 A. As I noted earlier, a change needs to be known and measurable or readily  
261 determinable. However, UE's attempted reliance on future gas costs that it  
262 admits are not fully reflective of its gas costs violates this requirement. Also, as  
263 was noted above, UE increased the amount of natural gas it places in storage  
264 and it also used various financial instruments to hedge its gas supply. Both of  
265 these events impact the actual gas costs that customers see from the utility. This  
266 further demonstrates that a future estimate on gas prices will likely not directly  
267 correspond to the price that ratepayers see from the utility.

268 Q. What is your recommendation to the Commission regarding Mr. Davis' reasons  
269 for using future gas prices as the basis for retaining UE's test year uncollectibles  
270 expense in this proceeding?

271 A. Based on my review, Mr. Davis' reasons are irrelevant to the issue of the  
272 appropriate amount of uncollectibles expense to allow UE in this proceeding. He  
273 attempts to make use of information that is not known and measurable and is not

274 readily determined. He also assumes an unproven linkage between high gas  
275 costs and high uncollectibles expense. Finally, he ignores the fact that the gas  
276 cost projections are not necessarily reflective of the actual gas costs that  
277 ratepayers will receive. Therefore, I recommend Mr. Davis' arguments not be  
278 given any weight in the consideration of the appropriate amount of uncollectibles  
279 expense determined in this proceeding

280 Q. Do you have any other UE recommendations?

281 A. No.

## 282 **CIPS Adjustments**

### 283 **Working Capital Associated with Gas in Storage**

284 Q. What recommendation did you make in your direct testimony regarding the  
285 amount of working capital allowance that CIPS should receive for the working  
286 gas contained in its leased and CIPS-owned natural gas storage fields?

287 A. I recommended that the Commission reduce CIPS' requested working capital  
288 allowance by \$5,464,000. This reduction involved three parts. The first involved  
289 taking into account the higher than average levels of natural gas contained in  
290 each of the CIPS-owned and leased storage fields during the test year versus  
291 historical years. The second involved making a minor correction due to the use  
292 of actual information rather than estimated information. The third involved the

293 removal of any working capital allowance associated with the gas contained in  
294 three storage fields (Belle Gent, Rotherwood, and Richwood).

295 Q. Did CIPS dispute your adjustments?

296 A. Yes and no. CIPS agreed to the proposed adjustments to the Rotherwood and  
297 Richwood storage fields and was silent with regard to my recommendation that  
298 actual information rather than estimated information be used to calculate the  
299 appropriate value. However, CIPS disputed the remaining adjustments.

300 Q. What did CIPS state with regard to the use historical gas volumes to adjust the  
301 gas volumes contained in the various fields during the test year?

302 A. Mr. Davis in his revised rebuttal testimony noted that for two of the leased  
303 storage agreements, Panhandle and Trunkline, the larger volumes of natural gas  
304 in storage during the test year versus historical periods was due to a change in  
305 the contractual volume arrangements at those fields.

306 For the other two leased storage agreements, NGPL and Texas Eastern, Mr.  
307 Davis did not offer anything specific for those particular agreements other than  
308 his general note that the use of three to five year historical averages of storage  
309 inventories in the various fields appears to be arbitrary.

310 With regard to four CIPS-owned storage fields, Mr. Davis noted that CIPS had  
311 found an error in the information provided to Staff for some of the historical gas  
312 volumes for the Sciota storage field. Mr. Davis also noted that for two of the

fields, Sciota and Ashmore, CIPS had, during the test year, increased the gas volumes maintained at those fields. For a third field, Johnston City, Mr. Davis pointed out that during the first year of my five years of historical data, CIPS was still finishing injection/withdrawal wells and the gas volume levels were not fully in place at that time. Finally, with regard to CIPS' last owned storage field, Belle Gent, Mr. Davis disputed my assertion that CIPS should retire the field. Therefore, Mr. Davis did not agree with my recommendation to remove the entire working capital allowance associated with the Belle Gent storage field from the proposed rates in this proceeding.

Q. Do you agree with any of Mr. Davis' arguments?

A. Yes. I agree, given the change in the Panhandle and Trunkline leased storage contractual arrangements, that no adjustments should be made to the working capital allowance associated with those volumes. I am also revising my adjustments to three of the CIPS-owned storage fields, Sciota, Ashmore, and Johnston City, to account for the information that Mr. Davis provided in his rebuttal testimony. However, I continue to recommend a working capital disallowance for each of those fields, as will be detailed below.

Q. What is your current recommendation regarding CIPS working capital allowance?

A. I recommend a reduction to CIPS' working capital associated for gas in storage of ~~\$891,000~~ 842,000.

333 **Average Storage Volume**

334 Q. In your direct testimony, you noted that the volume of gas contained in storage  
335 during the test year was larger than any of the historical periods that you  
336 reviewed and therefore the volume of gas that CIPS is allowed for a working  
337 capital allowance needed adjustment. Have you changed your opinion in this  
338 matter?

339 A. No. With the exception of the two leased storage fields (Panhandle and  
340 Trunkline) where CIPS changed the contractual volumes just prior to the start of  
341 the test year, I continue to recommend a reduction in the volumes at each of the  
342 storage fields.

343 Q. Do you have any additional information that indicates the volume of natural gas  
344 left in the various storage fields was higher during the test year than in other  
345 years?

346 A. Yes. I have two additional pieces of information. First, Mr. Davis, notes on page  
347 11 of his revised rebuttal testimony that a portion of the increased inventory at  
348 the Sciota storage field is attributable to reduced withdrawals as a result of  
349 unusually warm weather in 2001. However, this same warm weather also  
350 impacted every other storage field owned or leased by CIPS in 2001. With warm  
351 weather, the necessity for withdrawing gas from storage is usually lessened due  
352 to a reduction in the heating requirements for customers.

353 Second, for the five storage fields that I continue to recommend an average  
354 inventory reduction, I conducted a comparison of the volume of natural gas  
355 contained or reserved in storage versus the amount of gas withdrawn over the  
356 past several winters and the most recent winter season. This analysis, contained  
357 in ICC Staff Exhibit 11.0R, Schedule 11.5 CIPS, shows for four of the five fields  
358 the percentage of natural gas removed during the season was the lowest during  
359 the test year. This further indicates to me that the volume of gas contained in  
360 storage during the test year is higher than normal and should be adjusted  
361 downward.

362 Q. Have you altered your recommendation regarding what the Commission should  
363 allow CIPS as the appropriate working capital allowance for gas in storage at the  
364 NGPL and Texas Eastern leased storage fields?

365 A. No. The recommendation that I made in my direct testimony has not changed. I  
366 continue to recommend a reduction of \$26,000 for the NGPL leased storage field  
367 and \$135,000 for the Texas Eastern storage field, as shown on ICC Staff Exhibit  
368 11.0R, Schedule 11.1 CIPS.

369 Q. What disallowance did you recommend in your direct testimony with regard to the  
370 Ashmore storage field?

371 A. I recommended an adjustment of \$563,000.

372 Q. Have you changed your recommendation?

373 A. Yes. I am now recommending an adjustment of \$248,000, as shown on ICC  
374 Staff Exhibit 11.0R, Schedule 11.1 CIPS.

375 Q. Why are you altering your recommendation?

376 A. As Mr. Davis noted on page 10 of his revised rebuttal testimony CIPS recently  
377 increased the volume of working gas associated with this field by 185,000  
378 MMBtu. The additional gas was injected during the summer and fall of 2001.  
379 This time frame also corresponds to the beginning of the test year for CIPS.

380 The 185,000 MMBtu increase in gas volumes is a known and measurable  
381 adjustment. Therefore, I agree that some allowance should be made for the  
382 increased amount of gas that CIPS has injected into the field.

383 Q. How did you determine the appropriate percentage of the 185,000 MMBtu of  
384 additional inventory that CIPS put into the Ashmore storage field to add to the  
385 volume you determined in your direct testimony?

386 A. I took the average of the percentage that resulted from comparing the 13-month  
387 average for a given time period to the amount of gas withdrawn during the  
388 historical winter season. Using this number, I estimated the impact the additional  
389 185,000 MMBtu would have on the average that I calculated. ICC Staff Exhibit  
390 11.0R, Schedule 11.2 CIPS, page 2 of 2, shows this calculation and the resulting  
391 amount of additional volume of gas that I allowed for the Ashmore storage field.

392 As a result of this calculation, my recommended disallowance is now \$248,000,  
393 as shown on ICC Staff Exhibit 11.0R, Schedule 11.1 CIPS.

394 Q. What disallowance did you recommend in your direct testimony with regard to the  
395 Sciota storage field?

396 A. I recommended a disallowance \$193,000.

397 Q. Have you changed your recommendation?

398 A. Yes. I am now recommending an adjustment of \$~~70,000-21,000~~, as shown on  
399 ICC Staff Exhibit 11.0R, Schedule 11.1 CIPS.

400 Q. Why are you altering your recommendation?

401 A. As Mr. Davis noted on page 11 of his revised rebuttal testimony, CIPS found an  
402 error in the information that it had submitted to me for the period June 1997  
403 through December 1997. Mr. Davis also noted that CIPS had increased the  
404 volume of working gas associated with this field by about 50,000 MMBtu. My  
405 review of the data provided by CIPS indicates the increased volumes were  
406 injected during the time frame that corresponds to the test year in this  
407 proceeding.

408 The revised 1997 inventory data as well as the 50,000 MMBtu inventory increase  
409 are known and measurable changes. Therefore, I agree that some allowance  
410 should be made for the increased amount of gas that CIPS has identified.

411 Q. What is the impact of reflecting the revised 1997 inventory data in your analysis?

412 A. As shown in ICC Staff Exhibit 11.0R, Schedule 11.3 CIPS, page 1 of 2, revising  
413 the 1997 inventory information caused a \$6,000 reduction to my adjustment.

414 Q. What-How did you determine as the appropriate percentage of the 50,000  
415 MMBtu of additional inventory that CIPS put into the Sciota storage field to add to  
416 the volume you determined in your direct testimony?

417 A. I took the average of the percentage that resulted from comparing the 13-month  
418 average for a given time period to the amount of gas withdrawn during the  
419 historical winter season for that same time period. Using this number, I  
420 estimated the impact the additional 50,000 MMBtu would cause on the average  
421 that I calculated. ICC Staff Exhibit 11.0, Schedule 11.3 CIPS, page 2 of 2, shows  
422 this calculation and the resulting amount of additional volume of gas that I  
423 allowed for the Sciota storage field. As a result of this calculation, my  
424 recommended disallowance, including the use After reviewing CIPS' usage rates  
425 at Sciota, I determined that all of the 50,000 MMBtu of additional inventory  
426 should be added to the 13-month average. My adjustment for the Sciota storage  
427 field, after accounting for the additional 50,000 MMBtu of injection activity and  
428 using the revised 1997 inventory data, is now \$70,000 21,000, as shown on ICC  
429 Staff Exhibit 11.0R, Schedule 11.1 CIPS.

430 Q. What disallowance did you recommend in your direct testimony with regard to the  
431 Johnston City storage field?

432 A. I recommended a disallowance \$158,000.

433 Q. Have you changed your recommendation?

434 A. Yes. I am now recommending an adjustment of \$122,000, as shown on ICC  
435 Staff Exhibit 11.0R, Schedule 11.4 CIPS.

436 Q. Why are you altering your recommendation?

437 A. As Mr. Davis noted on page 12 of his revised rebuttal testimony, CIPS did not  
438 have all of the Johnston City injection/withdrawal wells in place until 1997. Also,  
439 a review of the information provided by CIPS indicated that the amount of gas  
440 contained in storage at this field in 1997 was not representative of the volumes  
441 for subsequent time periods. Therefore, I omitted the 1997 data from the  
442 average volume that I calculated in order to address the concerns raised by Mr.  
443 Davis. After accounting for this change, my recommended disallowance is now  
444 \$122,000, as shown on ICC Staff Exhibit 11.0R, Schedule 11.4 CIPS.

445 **Richwood and Rotherwood Storage Fields**

446 Q. What recommendation did you make in your direct testimony regarding the  
447 Richwood and Rotherwood storage fields?

448 A. I recommended the removal of any working capital allowance for that gas in  
449 storage associated with the Richwood and Rotherwood storage field. I also  
450 recommended that CIPS review its books and verify that there are no rate base

451 or expense requests in the instant proceeding associated with the Richwood  
452 storage field. Finally, I noted that CIPS should remove any rate base or expense  
453 associated with the Richwood storage field from its requested rates.

454 Q. Did CIPS agree with your recommendations?

455 A. Yes. CIPS removed its requested working capital allowance for the gas in  
456 storage for both the Richwood and Rotherwood storage fields. CIPS' actions  
457 were consistent with the recommendations I made in my direct testimony.

458 CIPS also agreed to remove any rate base or expense associated with the  
459 Richwood storage field. Staff witness Carolyn Bowers in ICC Staff Exhibit 9.0R is  
460 covering this topic in her rebuttal testimony.

461 Q. Do you have any other issues concerning the adjustments to the Rotherwood or  
462 Richwood storage fields?

463 A. Yes. I intended to treat the Richwood and Belle Gent storage fields in the same  
464 manner, that is recommend the retirement of both fields. I assumed in my direct  
465 testimony that the removal of any rate base or expense associated with the  
466 Richwood storage field was the same as requesting the retirement of the field.  
467 However, I was recently made aware that is not the case and that different  
468 accounting treatment is provided for the retirement of a facility versus removing  
469 its rate base and expense. Therefore, to clarify my position, I recommend that  
470 CIPS retire the Richwood storage field. The impact of retiring the Richwood

471 storage field is contained in the rebuttal testimony of Carolyn Bowers, ICC Staff  
472 Exhibit 9.0R.

473 **Retirement of the Belle Gent Storage Field**

474 Q. What recommendation did you make in your direct testimony regarding the Belle  
475 Gent storage field?

476 A. I recommended that CIPS retire the Belle Gent storage field.

477 Q. What was the basis for your recommendation?

478 A. I noted that CIPS could not use the Belle Gent storage field to provide peak day  
479 deliverability to its customers and the non-peak day withdrawals are very  
480 infrequent. I also concluded that CIPS' customers did not receive any net  
481 economic benefit from the operation of the field. Therefore, the field was neither  
482 needed nor economically justified. Therefore, I concluded the Belle Gent storage  
483 field is no longer "used and useful" and that CIPS should retired the field.

484 Q. What did CIPS state regarding your recommendation?

485 A. Mr. Davis, on pages 3 through 6 of his revised rebuttal testimony, explains why  
486 he disagrees with my assessment of the Belle Gent storage field. In particular,  
487 Mr. Davis noted that the storage field could provide peak day deliverability  
488 beginning in February should the peak occur then. He also noted that since the

489 field can withdraw gas in February and in the following months it was possible for  
490 the field to provide an economic benefit to customers.

491 Q. Do you agree with Mr. Davis' statement that the field can provide peak day  
492 deliverability?

493 A. No. All gas utilities in Illinois plan their supply portfolios to meet a potential peak  
494 demand load through a certain time frame, usually through the end of January or  
495 very early February. However, because the operation of the Belle Gent storage  
496 field is dependent upon a reduction in gas pressure in the neighboring Johnston  
497 City storage field, CIPS does not rely upon it for peak day deliverability.  
498 Therefore, the Belle Gent storage field is not needed for CIPS to supply its  
499 customers' peak day deliverability demands.

500 As I noted in my direct testimony, CIPS could only provide me with twelve dates  
501 over the past ten years where it had withdrawn gas from the Belle Gent storage  
502 field and several of those occasions did not even occur during the winter season.

503 Further, CIPS noted, in its response to Staff data request CIPS-ENG 1.47, that  
504 its gas supply portfolio would have allowed it to provide reliable service to its  
505 customers in the event the Belle Gent storage field's capacity had not been  
506 available during each of those twelve days. This indicates to me that the field is  
507 not needed for late winter season peak day deliverability.

508 Q. Do you agree with Mr. Davis' statement that the Belle Gent storage field can  
509 provide an economic benefit?

510 A. No. I do agree with the calculation that Mr. Davis' provided in his revised rebuttal  
511 testimony regarding the \$17,000 in commodity gas savings CIPS achieved by  
512 operating the field during February 2003. However, Mr. Davis overlooks the  
513 other costs that are associated with the field and the fact that while some  
514 commodity gas cost savings were achieved in 2003, it was the first time the field  
515 had operated during the winter season since 1996. Stated differently, ratepayers  
516 waited seven years before receiving the \$17,000 commodity gas cost reduction  
517 in 2003.

518 Q. What other costs are incurred if the Belle Gent storage field is not retired?

519 A. As indicated in CIPS' response to Staff data request CIPS-TEE-076, the Belle  
520 Gent storage field has \$209,492 in plant in service, \$5,103 in depreciation  
521 expense, \$3,573 for other operating expense, and a working capital allowance for  
522 gas in storage of \$295,799. CIPS indicated that the plant in service value was  
523 overstated because some common plant was also in the same account. CIPS  
524 estimated, in its response to Staff data request CIPS-ENG 1.67 and through  
525 discussions with Company witness Opich, that the total amount of Belle Gent  
526 plant in service is actually \$127,138 ( $195,976 * .58 + 8,300 + 5,172$ ).

527 I calculated that the above costs correspond to an annual revenue requirement of  
528 approximately \$67,251<sup>1</sup> (using Staff's rate of return and its gross revenue  
529 conversion factor). Obviously, a \$17,000 commodity savings in one year out of

---

<sup>1</sup>  $\$67,251 = \$5,103 + \$3,573 + (\$127,138 * 1.67064 * .0829) + (\$295,799 * 1.67064 * .0829)$

530 seven does not compare favorably to an annual cost of \$67,251. Therefore, the  
531 Belle Gent storage field is not providing any economic benefit to ratepayers.

532 Q. What is your recommendation regarding the Belle Gent storage field?

533 A. CIPS failed to show that the Belle Gent storage field is needed in order to meet  
534 its customers' demand requirements. CIPS also failed to show how the storage  
535 field provides any economic benefits to its ratepayers. Therefore, the Belle Gent  
536 storage field is no longer used and useful and CIPS should retire the facility.

### 537 **Installation of New Services**

538 Q. Did CIPS agree with your proposal to modify CIPS' tariff to include a commitment  
539 to install new services in 15 working days or less?

540 A. No, Mr. Davis provided revised rebuttal testimony discussing why he disagreed  
541 with my recommendation. I have already addressed these arguments under the  
542 UE section of my rebuttal testimony. The statements I made regarding UE  
543 equally apply to CIPS.

544 Q. What is your current recommendation for tariff language changes to CIPS' tariff  
545 in order to place limits on providing new services?

546 A. I recommend, for the same reason I discuss under the UE section of my  
547 testimony, that CIPS alter its tariff's Terms and Conditions under Installation of

548 Service, Original Sheet No. 10.002, by adding the following to the existing  
549 language:

550 The Company shall provide service connections to new customers  
551 within 15 working days at the requested location after being notified  
552 by the party who completed the service application request that  
553 property grading is in place, any obstructions or construction  
554 materials are removed, the location for the meter installation is  
555 prepared, and the Company determines a distribution main  
556 extension is not necessary in order to provide service. The 15-day  
557 time limit does not apply for those instances where specialized  
558 equipment is necessary for or to install the service connection or in  
559 the event of work stoppages, insurrection, acts of terrorism, or other  
560 calamities that require the Company's resources be directed  
561 elsewhere.

562 **Uncollectibles Expense**

563 Q. You also addressed uncollectibles expense in the UE section of your testimony.  
564 Is your UE discussion the same discussion you would provide for CIPS?

565 A. Yes. The comments made by Mr. Davis in his revised rebuttal testimony  
566 concerning any potential link between future gas costs and uncollectibles  
567 expense are irrelevant in determining the appropriate amount of uncollectibles  
568 expense the Commission should allow CIPS.

569 Q. Do you have any other CIPS recommendations?

570 A. No.

571 Q. Does this conclude your rebuttal testimony?

572 A. Yes.

## Summary of UE Adjustments

### Direct Adjustments

1	Gas in Storage - Volume Adjustment (per Schedule 4.2 UE)	\$125,000
2	Gas in Storage - Actual Inventory Value (Per Schedule 4.3 UE)	\$2,000
3	Total Reduction to Working Capital Allowance for Gas in Storage	\$127,000

### Rebuttal Adjustments

#### Rate Base

4	Gas in Storage - Volume Adjustment - Withdrawn	\$0
5	Gas in Storage - Actual Inventory Value (per Schedule 4.3 UE)	\$2,000
6	Total Reduction to Working Capital Allowance for Gas in Storage	\$2,000

#### Expenses

7	Reduction in AMR Expense	\$210,000
---	--------------------------	-----------

Line 3 = Sum of Line 1 and 2

Line 6 = Sum of Line 4 and 5

Line 7 = Per Staff Exhibit 11.0R, Schedule 11.2 UE

## **AMR Expenses**

Month	Expense
July - 2001	\$35,826.60
August - 2001	\$17,685.32
September - 2001	\$0.00
October - 2001	\$19,153.14
November - 2001	\$16,161.76
December - 2001	\$19,279.83
January - 2002	\$18,408.05
February - 2002	\$14,818.04
March - 2002	\$17,783.42
April - 2002	\$16,693.52
May - 2002	\$15,911.35
June - 2002	\$18,695.85
Total	\$210,416.88

## Summary of CIPS Adjustments

### Direct Testimony Recommendation

1	Ashmore Storage Adjustment (per Schedule 4.2 CIPS)	\$563,000
2	Sciota Storage Adjustment (per Schedule 4.3 CIPS)	\$193,000
3	Johnston City Storage Adjustment (per Schedule 4.4 CIPS)	\$158,000
4	NGPL - DSS Storage Adjustment (per Schedule 4.5 CIPS)	\$26,000
5	Texas Eastern Storage Adjustment (per Schedule 4.6 CIPS)	\$135,000
6	Trunkline NNS Storage Adjustment (per Schedule 4.7 CIPS)	\$126,000
7	Panhandle Storage Adjustment (per Schedule 4.8 CIPS)	\$3,416,000
8	Belle Gent Storage Inventory Value (per Schedule 4.9 CIPS)	\$297,000
9	Rotherwood Storage Inventory Value (per Schedule 4.9 CIPS)	\$392,000
10	Richwood Storage Inventory Value (per Schedule 4.9 CIPS)	\$165,000
11	Gas in Storage - Actual Inventory Value (per Schedule 4.9 CIPS)	-\$7,000
12	Total Reduction to Working Capital Allowance for Gas in Storage	\$5,464,000

### Rebuttal Recommendation

13	Ashmore Storage Adjustment (per Schedule 11.2 CIPS)	\$248,000
14	Sciota Storage Adjustment (per Schedule 11.3 CIPS)	<del>\$70,000</del> <u>\$21,000</u>
15	Johnston City Storage Adjustment (per Schedule 11.4 CIPS)	\$122,000
16	NGPL - DSS Storage Adjustment (per Schedule 4.5 CIPS)	\$26,000
17	Texas Eastern Storage Adjustment (per Schedule 4.6 CIPS)	\$135,000
18	Trunkline NNS Storage - Staff withdrew Adjustment	\$0
19	Panhandle Storage - Staff withdrew Adjustment	\$0
20	Belle Gent Storage Inventory Value (per Schedule 4.9 CIPS)	\$297,000
21	Rotherwood Storage - Company Accepted Adjustment	\$0
22	Richwood Storage - Company Accepted Adjustment	\$0
23	Gas in Storage - Actual Inventory Value (per Schedule 4.9 CIPS)	-\$7,000
24	Total Reduction to Working Capital Allowance for Gas in Storage	<del>\$891,000</del> <u>\$842,000</u>
